Name:	SHIVANK JAT	Study Date:	21-Jul-2025
Age & Sex:	21 Years /M	Accession:	R032068652
Exam:	CT SCAN OF BRAIN ANGIO & VENO	PID:	PI0000072788
Physician:	Dr. Emergency Medicine Team	OP	

CT SCAN OF BRAIN (ANGIOGRAPHY +VENOGRAPHY)

Clinical brief: C/o One episode of weakness in right UL/ LL

CT BRAIN:

The supratentorial brain parenchyma shows normal morphology. The gyral /sulcal pattern is normal. The deep cerebral structures including basal ganglia, thalami, internal capsule is normal. The CT attenuation of various parts is normal for the region. There is no evidence of any obvious intra cranial space occupying lesion or other focal lesion.

The lateral, third and fourth ventricles are of normal size, shape and position.

The supratentorial and basal cisterns and extracerebral CSF spaces are normal.

There is no mass effect, shift of midline structures or cerebral edema.

Posterior fossa contents including cerebellum and brainstem structures appear normal.

CT ANGIOGRAPHY:

Bilateral CCA, ECA and ICA appear normal in the neck.

Bilateral ICA is normal in the intracranial portion.

Left MCA and its branches are normal.

Left ACA is normal.

Right MCA and its branches are normal.

Right ACA is normal.

ACOM is normal.

Both the vertebral arteries and PCAs are normal.

CT VENOGRAPHY:

The superior sagittal, straight, left transverse and left sigmoid sinuses display normal flow.

The right sigmoid and transverse sinuses are hypoplastic.

There is no evidence of sinus thrombosis.

The internal cerebral veins, basal vein of Rosenthal and proximal jugular veins are normal.

Name: SHIVANK JAT
Age & Sex: 21 Years /M
Exam: CT SCAN OF BRAIN ANGIO & VENO
Physician: Dr. Emergency Medicine Team

Study Date: 21-Jul-2025
Accession: R032068652
PID: PI0000072788
OP

IMPRESSION:

- No evidence of haemorrhage in the brain parenchyma. No obvious hypodensity in the brain parenchyma to suggest acute infarction. However, given the clinical scenario MRI brain study is suggested to rule out hyperacute infarction.
- CT angiography reveals no obvious abnormality.
- CT venography reveals no obvious abnormality.

Suggest: Clinical correlation and SOS further evaluation.
